Like other reviews said, the stickers DO NOT STICK. Really at all. I was getting really frustrated on my first one, then had the bright idea to use an adhesive. All I had at the time was a glue stick: Perfection. Even when the glue dried, it was tacky enough to work with the adhesive on the sticker to hold it in place. The next time when I was with all my craft supplies, rubber cement was better (as I assumed it would be for

its tacky-ness), I just made sure the layer was thin by using a smaller brush than the one in the lid to control how much I put down and to get into the sharp corners on some designs. (Obviously I do this step on the entire design before starting, not on each section during application of each sticker.) Plus, the beauty of rubber cement is that you can let it dry then cleanly roll off any excess if it got somewhere you don't want it. I don't find having to do this step annoying for any reason other than the fact that the stickers should simply just stick on their own. I hope future versions of this use a better adhesive, but all in all, I'd still consider another adult version of this. One of the tips in the beginning of the book is to lay a sheet of paper over it once completed and run a bone folder (or something firm and flat) over the design, presumably to help the stickers stay in place, so they must know it's an issue. Also, if you're expecting perfection like the photos, you won't get it. The stickers aren't a perfectly \*precise\* match to the shape, so you will see some white in between, and then others overlap each other, even with precision application...some shapes just aren't exact matches. My perfectionism and I had a hard time with this at first, but we don't care now. I use cheap tweezers so that helps a lot with small pieces and alignment. I have not tried tearing out one of the design pages yet, but I have to be very careful when tearing the sticker pages from the back because it is a thicker paper and you have to be tough, but the stickers near the edge can rip away when doing this, so just be careful if that's your method. 1 of 1 people found the following review helpful. The kids like it By Kristi Clark It's fun to do once but the stickers are actually really challenging to get exactly on the lines so the results don't end up looking like the samples. But the kids like it, it's fun to hunt for the matching boxes. I was hoping it was going to be meditative like coloring but it's a little more frustrating than that. 1 of 1 people found the following review helpful. Small Motor Skills Development By Betty These are wonderful books (and there are many to choose from) for the child who likes to sit and have quiet time. Sticker by number requires the child to choose and place stickers to create a picture which are a little harder. Wonderful for small motor skill development and concentration. I would recommend these books.

Introducing a compelling new activity for crafters and artists, doodlers and coloring book enthusiasts of all ages. *Paint by Sticker* includes everything you need to create twelve vibrant, full-color "paintings." The images—including sunflowers, a fox, a hummingbird in mid-flight, two boats on the water—are rendered in "low-poly," a computer graphics style that creates a 3-D effect. As in paint-by-number, each template is divided into dozens of spaces, each with a number that corresponds to a particular colored sticker. Find the sticker, peel it, and place it in the right space. Add the next, and the next, and the next—it's an activity that's utterly absorbing as you watch a "painting" emerge from a flat black-and-white illustration to a dazzling image with color, body, spirit. The pages are perforated for easy removal, making it simple to frame the completed images.
