admit to being skeptical about this dubious title (when Elvis is mentioned, one could lose readers), but thanks to the sample system I decided this comedic investigator was anything but a Elvis "wing nut" and instead had done extensive research into the covert world of ours that has twisted historical facts and been the hidden inventors of self-serving cover for crimes against the state in all manner of areas, from JFK's assassination to UFO's and the WW II, German intense work on achieving their own discs. Belzer laces his chapters with humor to lighten subjects that are anything but SNL material. He probes his topics that would elicit curiosity (hopefully) from the most skeptical cynics who shut their minds whenever a whiff of "conspiracy" is mentioned; that in itself is quite a self-serving trick to shield true "evil doers" from ever being made accountable for their crimes, plots/conspiracies that have countless, knowledgeable victims who could, if they didn't meet with impossible "suicides," brought light to who the perpetrators of treason, lies to cover false flag events, etc. that have marred our national reputation, lead to needless wars and a loss of our constitutional rights! Hopefully Belzer's book will lead the average person to at least entertain the ideas presented here and maybe investigate for themselves the curious facts that the press, for their own self-serving motives, have been complicit in promoting lies/ instead of truths to explain national, tragic events that have lead the nation in paths that could only be viewed as reprehensible. Maybe the all too compliant press who know the "straight skinny" yet assiduously cover for the villains are just as corrupt and evil as the dark doers they so loudly extoll as heroes! 0 of 0 people found the following review helpful. Possibly the best book with all the FACTS of the JFK assassination By G. Stone Possibly the best book with all the FACTS of the JFK assassination, proving that LBJ, Nixon, and J. Edgar Hoover were all inside the planning of the murder of an American President. A silent coup d'état, never seen before in any government, and they pulled it off and fooled the whole country for 4 decades, or more. This is a MUST READ, and should be placed in every school in the nation. It's a part of history. And, it is all verifiable! 0 of 0 people found the following review helpful. Truths or Stories? By Pat Cincotta Interesting book. It just made me even more confused, though, over all the events that have taken place. Things could have happened his way, and they could have happened the official way. Deep in my gut, though, I have never been able to accept that Oswald could have been working all alone. And having him killed before learning more from him fits a conspiracy. Then his killer suddenly getting cancer and dying. It is a book that makes you stop and think. If you lived through all these like I did, you will probably wonder till you die if we know the truth or not about them.

"I'm not asking you to believe every conspiracy theory you'll find in this book. . . . I didn't write this book to give you all the answers. The Warren Commission did that, and the answers were all wrong. I wrote this book to inspire you to do what the powers that be wish you wouldn't: to question authority . . . and to keep an eye out for Elvis."--RICHARD BELZER In UFOs, JFK, and Elvis, the distinguished statesman of stand-up comedy tackles some of the biggest conspiracies and cover-ups this side of Roswell. Just what is it that they don't want you to know about the assassination of John F. Kennedy, Area 51, and what the American astronauts really found on the moon? The unexplained crash at Roswell and the mysterious "face" on Mars? The link between the Nazis and the U.S. space program? Evidence of extraterrestrial experimentation? Finally, one lone "nut" exposes the conspiracy to keep conspiracies a dirty little secret, standing up to the shadowy forces that would have us believe that Oswald acted alone, those lights in the sky are weather balloons, and fluoridated water is good for you (yeah, right). "Some of the smartest people I know . . . find it easier--and certainly more comforting--to believe that America is the only country on earth with no conspiracies at all." Just remember: do not ask on whom The Belz has told--he's told on them.

.com Best known as Detective John Munch on the hit TV series Homicide, Richard Belzer is also an accomplished standup comedian with a knack for political commentary in the tradition of Mort Sahl and Dick Gregory. In UFOs, JFK, and Elvis, he applies his analytic powers to two of the most controversial topics of the late 20th century: the assassination of President John F. Kennedy in 1963 and the alleged U.S. government cover-up of the existence of alien life. (The reference in the title is the book's only substantial Elvis sighting.) Belzer sensibly avoids pretending to have the answers, opting instead to focus on the questions themselves. Why does the Zapruder film fail to synchronize with other footage of the Kennedy shooting? What's the real background on Lee Harvey Oswald--and who really posed for that famous backyard photo? Did NASA regularly suppress UFO sightings by Apollo and Gemini astronauts? And how about that giant face on the surface of Mars? While Belzer's sarcastic, antiauthoritarian tone may not convince you that aliens walk among us, it's rather difficult by book's end to fully dismiss his belief that "history is just a collection of accepted lies" told to keep the masses in line. --Ron Hogan From Publishers Weekly First Mort Sahl, now Richard Belzer. Every now and then a political comedian finds himself obsessed with the murder of John F. Kennedy and sacrifices the funny in the process. Though this book is categorized as humor, it offers sarcasm but few laughs. And why should it? Belzer, now best known as Detective Munch on TV's Homicide, is serious here. Obsessed with conspiracies, he apparently read a bunch of books (many from fringe publishers) on the subject and decided to share the fruit of his musings. Most concern the assassination, and, indeed, many aspects remain in dispute. But when he declares Gerald Posner's Case Closed "a grossly overstuffed suitcase," Belzer doesn't inspire confidence, and he doesn't offer footnotes so readers can check his sources. The second half of the book relies significantly on conspiracy

expert Jim Marrs, author of *Alien Agenda*. Belzer relates that many people who've consented to alien experimentation have told Marrs they don't consider it a violation. No wonder Belzer says, "I believe that history is just a collection of accepted lies." He wrote this book, he claims, to inspire us to question authority. Mr. Belzer, tell jokes. Author tour. Copyright 1999 Reed Business Information, Inc. From *Library Journal* Best known for his role as Detective Munch in the TV police drama *Homicide*, Belzer was originally a stand-up comic. Here he confronts the two biggest conspiracy theories of our time, JFK's assassination and UFOs. Elvis is mentioned only in the context of George Bush's response when asked if there might have been a conspiracy involved in the JFK assassination: "There are some people who still think Elvis is alive." With a deft and entertaining combination of satire and in-your-face facts, Belzer challenges his audience to accept the extent of alleged government cover-ups. The first half of the book on JFK is more interesting than the second half on UFOs, but seasoned conspiracy theorists will find no new revelations in either case. Belzer tries to goad casual skeptics into becoming more passionate about their doubts over "official" explanations such as the Warren Report. Even the veracity of NASA's lunar landings are once again called into question. The bibliography is a welcome and useful addition. Popular fare for public libraries. A Joe J.
