Matt Pagett : What Shat That?: A Pocket Guide to Poop Identity before purchasing it in order to gage whether or not it would be worth my time, and all praised What Shat That?: A Pocket Guide to Poop Identity:

0 of 0 people found the following review helpful. Use this book to find out what did that in your back yard. By MetalsParts of this book are humorous, but it is not a joke. In addition to describing the scat of many animals, it tells why it looks the way it does. Discusses the diet, digestive system and habits of each of the animals. Easy to read and entertaining and actually usefull if you are interested in animals or nature in general. The parts on common animals maybe more usefull than the ones on rinos or aardvarks, but they also give an interesting insite on how animals have evolved. 0 of 0 people found the following review helpful. Perfect for any young boy! By stephanie This book got just the reaction I was going for, "giggles, snickers and snorts!" The animals included are from around the world, so is not very useful for actual identification, unless you have penguins, gazelles, or T-Rexes roaming your backyard. But the facts are correct and does introduce the idea that animals can be identified in this fashion. One word of warning however the present tense of "s***" is used throughout the book! My son is 7, loved the book, and has since been out hunting to see what we have roaming in our back yard and beyond. 0 of 0 people found the following review helpful. something unique By Patricia Lewis Love this. Have given to all the grandkids. Kids love something unexpected. Now grandkids are out with friends searching for pop instead of playing video games. So what if I am the 'twisted' grandmother. b

Ideal for any nature lover or backyard biologist, WHAT SHAT THAT? is an original and insightful survey of the substance that—like it or not—unites every living creature, from your pet dog to the African elephant. The fifty entries found here cover a range of mammals, birds, lizards, and even fish, including common domestic creatures as well as wild and exotic species. Full-color photographs and illustrations reveal each type of poop in all its glory, and handy descriptions and “scat facts” run throughout. Find out: Why rabbits like to eat their own droppings How tiger scat helped the CIA during the Vietnam War Which creature's poop could help save the planet Why one animal's waste product is used to make the world's most expensive coffee Truly informative and highly entertaining, WHAT SHAT THAT? is also probably more than you ever wanted to know but were too grossed out to ask.

From the Publisher *? A one-of-a-kind field guide to matching species with their feces, featuring 50 animals and their droppings. *? Includes 25 full-color photos of poop, 50 silhouette-style illustrations, 50 maps, and 25 scale drawings. *? Starting with the smallest (plankton poo) and working up to the largest (whale poo), each entry examines both the scat and its source and provides a wide range of facts, figures, and feature boxes--some surprising, some enlightening, others downright disgusting. About the Author MATT PAGETT is an artist, illustrator, and writer based in Brighton, England. A graduate of Edinburgh University, he has worked on a number of books, including Household Management for Men, Make Your Own Sex Toys, The Campsite Companion, and 101 Golden Rules of Fishing. The natural world has often featured in Matt's artwork, which has been exhibited internationally.
